

**SOURCEDAY INTELLIGENCE:**

# Intelligent Risk Mitigation to Enhance Supply Chain Performance

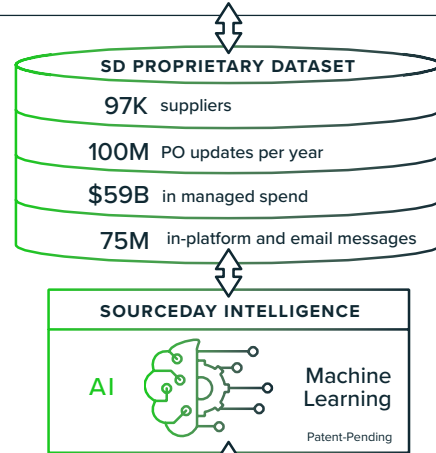

Supply chains act as the critical epicenter for manufacturing and distribution organizations, and that means any disruption can set off a cascading effect across the entire operation. One late or incomplete inbound shipment can lead to production delays, misaligned inventory, customer order lags or priority shipping costs, overdue payments, and even missed revenue projections.

**Wouldn't it be better to prevent disruptions before they can cause real problems? SourceDay Intelligence can help.**

SourceDay Intelligence, the next evolution of SourceDay risk management, is a proprietary, Machine Learning platform engineered to enhance supply chain performance by predicting unforeseen inbound supply risks, recommending effective resolutions, and automating PO management workflows.

SourceDay Intelligence helps you head off the up to 70% of inbound supply issues that occur prior to shipment. Minimize disruption in your supply chain and maintain your business value.

**SOURCEDAY PO LIFECYCLE MANAGEMENT PLATFORM**

**SOURCEDAY RISK FRAMEWORK**

**PATENT-PENDING DATA-DRIVEN INSIGHT**

- The uniquely powerful advantage of **SourceDay Intelligence's** patent-pending risk modeling, trend identification, and pattern matching capabilities is that it is driven by our proprietary dataset - the most comprehensive PO Lifecycle dataset in existence.
- SourceDay Intelligence delivers customized insights for individual customers, uncovers risk blind spots that would be undetectable, and empowers users to resolve risks proactively.

### PREDICT AND RESOLVE RISKS EARLIER AND FASTER:

SourceDay leverages a decade of domain expertise to identify the areas SDI can make the most impact throughout our solutions, providing intuitive support to enhance, automate, and streamline human decision-making at the most vulnerable stages of the supply chain.

Our patent-pending advanced data models continually learn from the largest (and constantly growing) PO Lifecycle Management dataset in existence to identify global patterns, detect unforeseen risks, and calculate the potential impact before disruption occurs.

But SDI doesn't just detect and predict risks, it also provides you with resolutions. Built on our years of experience, SourceDay Intelligence understands how to resolve the most common supply chain issues and provides actionable recommendations tailored to that specific risk. You can make faster, smarter, more proactive decisions based on real-time insights, preempt risks earlier in the PO lifecycle, and ensure your inbound supply remains uninterrupted.

### LEAD TIME RISK:

Identifies POs likely to be late due to unrealistic lead times, recommends solutions like resolving due dates with suppliers via smart messaging templates.

### MISSING

#### ACKNOWLEDGEMENT RISK:

Identifies POs that may have slipped through the cracks as they have not been acknowledged within the supplier's normal timeline.

#### PROPOSED CHANGE RISK:

Highlights POs with supplier-proposed changes and offers detailed recommendations to address the changes.

#### EMAIL ISSUE RISK:

Alerts to POs that failed to deliver due to incorrect or blocked email addresses and provides steps to verify and update supplier contact information.

## LET'S TALK:

In a competitive market, your supply chain means the difference between success and losing customers. While you can't do much about economic conditions, with SourceDay you can eliminate the risks that are in your control. SourceDay Intelligence is the first and only solution that helps you uncover hidden risks, resolve them quickly and manage manual workflows automatically. Stopping risks before they turn into disruptions and lost revenue keeps operations running smoothly and your entire organization on track.
